

Geelong Galvanizing Environmental Policy

For over 20 years Geelong Galvanizing has specialized in providing high quality surface finishes for steel products in the construction, landscaping and engineering industries.

Geelong Galvanizing strives to be environmentally aware and actively supports programs that minimise negative impacts on our environment. We are committed to complying with relevant environmental legislation and pollution prevention.

Geelong Galvanizing seeks to understand the effects our activities have on the environment and to continually improve our environmental performance by supporting the following initiatives:

- Waste minimisation
- Pollution prevention
- Reduction of resource consumption
- Reusing and recycling materials
- Responsible waste disposal
- Procurement of environmentally preferable products

Geelong Galvanizing makes our environmental plans, objectives and performance available to all stakeholders. We audit our results to ensure the environmental benefits we achieve can be independently verified.

We use internal training programs and reviews to ensure this policy and its procedures are understood, implemented and maintained throughout the business.

Our belief is that this policy can only be successfully achieved with the support and commitment of all employees of Geelong Galvanizing.

David Chaston.
